RESTRICTION

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1, 5-12, 14-21 and 28, drawn to a movable assembly for imparting vibratory motion to an item of furniture, classified in class 297, subclass 217.3.
 - II. Claims 23-27, drawn to an electromagnetic apparatus for producing a vibratory motion, classified in class 73, subclass 668.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require, for examples, a magnet on a base plate, a spring assembly, or a bushing material for providing transverse support. The subcombination has separate utility such as for producing a vibratory motion of a vehicle.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2856

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
